

# TIMOTHY J. HATCH

Full-Cycle Software Engineer

Kuna, ID (208) 871-9016 timothyhatch.com t\_j\_mac\_06@yahoo.com

## SUMMARY

Full-cycle Software Engineer with 10+ years taking products from **inception to production** across web, cloud, and automation. Strengths in **React/TypeScript, Node/Java, AWS**, and **CI/CD & IaC**. Known for shipping end-to-end: architecture, pipelines, backend services, micro-frontend UIs, and developer enablement.

## CORE SKILLS

|                     |                                                                                                              |
|---------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Frontend</b>     | React, TypeScript, Angular/AngularJS, Vue, React Native, HTML/CSS, D3                                        |
| <b>Backend</b>      | Node.js, Java (Spring), C#, Python, REST APIs                                                                |
| <b>Cloud/DevOps</b> | AWS (Lambda, S3, API Gateway, EventBridge, SQS, CloudWatch, EKS), Terraform, GitHub Actions, Jenkins, Bamboo |
| <b>Testing</b>      | Jest, Cypress, Playwright, JUnit, Pytest                                                                     |
| <b>Data</b>         | PostgreSQL, MongoDB, SQL                                                                                     |
| <b>Tools</b>        | Nx, Webpack Module Federation, Linux, macOS, Jira, Bitbucket                                                 |

## PROFESSIONAL EXPERIENCE

**Founder & Full-Stack Engineer — The Whirligear Dragon** D2C + Apps Apr 2025 – Present  
Boise, ID

- Building an iOS **SwiftUI** app (CNC inlay pricing wizard) with modular steps, real-time calculations, and groundwork for future unit conversion.
- Launched and iterated a **Shopify** storefront (Liquid, React/TypeScript snippets), SEO updates, and conversion-oriented landing content.
- Set up **email deliverability** (SPF/DKIM/DMARC) and improved domain authentication to reduce spam-folder placement.
- Ran **Meta/TikTok** ad experiments; analyzed reach/click-through to refine creatives and audiences; produced short-form video and Kickstarter assets.
- Prototyped and manufactured CNC products (toolpaths, tapered-bit inlays, workholding, finishing) while documenting processes for repeatability.

**Software Engineer — ResMed** Mar 2022 – Apr 2025  
San Diego, CA (remote/hybrid)

- Served as a **Full-Cycle Developer**: design → build → deploy → operate for multiple services and UIs.
- **AWS & IaC**: designed infra and wrote **Terraform**; shipped event-driven systems using **EventBridge + SQS + Lambda**.
- **Containers & Networking**: delivered microservices on **EKS/Kubernetes**; migrated an SPA from **S3/CloudFront** to **EKS** behind **NGINX Ingress** for unified routing.
- **Frontend**: built **React** micro-frontends using **Nx** and **Webpack Module Federation**; standardized on **TypeScript**.
- **Backend**: Java microservices on EKS and Python Lambdas; contributed to story slicing, backlog refinement, and cross-team integration.
- **CI/CD**: implemented **GitHub Actions**; integrated with **Jenkins**, Bitbucket triggers to CodePipeline, and **Bamboo** on legacy paths.

## Software Engineer (Senior Associate) — Allata

Dec 2018 – Mar 2022

- Delivered features across multiple client engagements:
  - Sales enablement web app with a savings calculator for a healthcare services org.
  - Accounting platform to ingest data and generate **tax-form PDFs** for a global firm.
  - Enhancements for a large HOA management platform.
- Cloud across **Azure** (Data Factory, Cosmos DB, SQL, Redis, Pipelines) and **AWS** (CloudWatch, Lambda, S3, API Gateway).
- Stacks included **Java/Spring Boot + Angular 13 + SQL + Cosmos (Mongo API)** and **C# back end + Angular 8 + legacy MVC**.

## Software Engineer — VersaBuilt

Aug 2017 – Dec 2018

- Built UIs (AngularJS → Vue) and **custom SVG controls** to control a **6-axis robot arm**.
- Wrote **RAPID** to adjust robot motions through 3D space; implemented quaternion math for kinematics.
- Built **Node.js** REST APIs integrating robots and CNC machines.

## Software Engineer — Emerson (acquired PakSense)

Aug 2015 – Aug 2017

- Lead/primary developer for **Node.js** REST APIs and an **AngularJS** customer portal.
- Migrated data from **SQL → MongoDB**; contributed to Cloud IoT architecture.
- Authored ETL scripts in **Python** and **JavaScript**.

## EDUCATION & COURSES

- **Full Sail University** — Coursework toward B.S., Game Design (**88 credits completed**), May 2018
  - Highlights: JavaScript game programming, UX fundamentals, Unity level design, team-based development.
- **MongoDB University** — MongoDB for Node.js Developers; MongoDB for Python Developers, Jul 2016.
